

ATTACHMENT I – Abstract

A tower for a wind turbine. The tower has an exterior side and an interior side. The tower is at least partly composed of prefabricated metal wall parts. Each wall part includes an essentially quadrangular portion having an outwardly facing surface in the direction of the exterior of the tower and an inwardly facing surface in the direction of the interior of the tower. The portion having a top edge, a bottom edge, a first side edge and a second side edge. The first side edge is provided with a first flange along at least part of the length of the first side edge and the second side edge is provided with a second flange along at least part of the length of the second side edge. A method for constructing a tower for a wind turbine.
